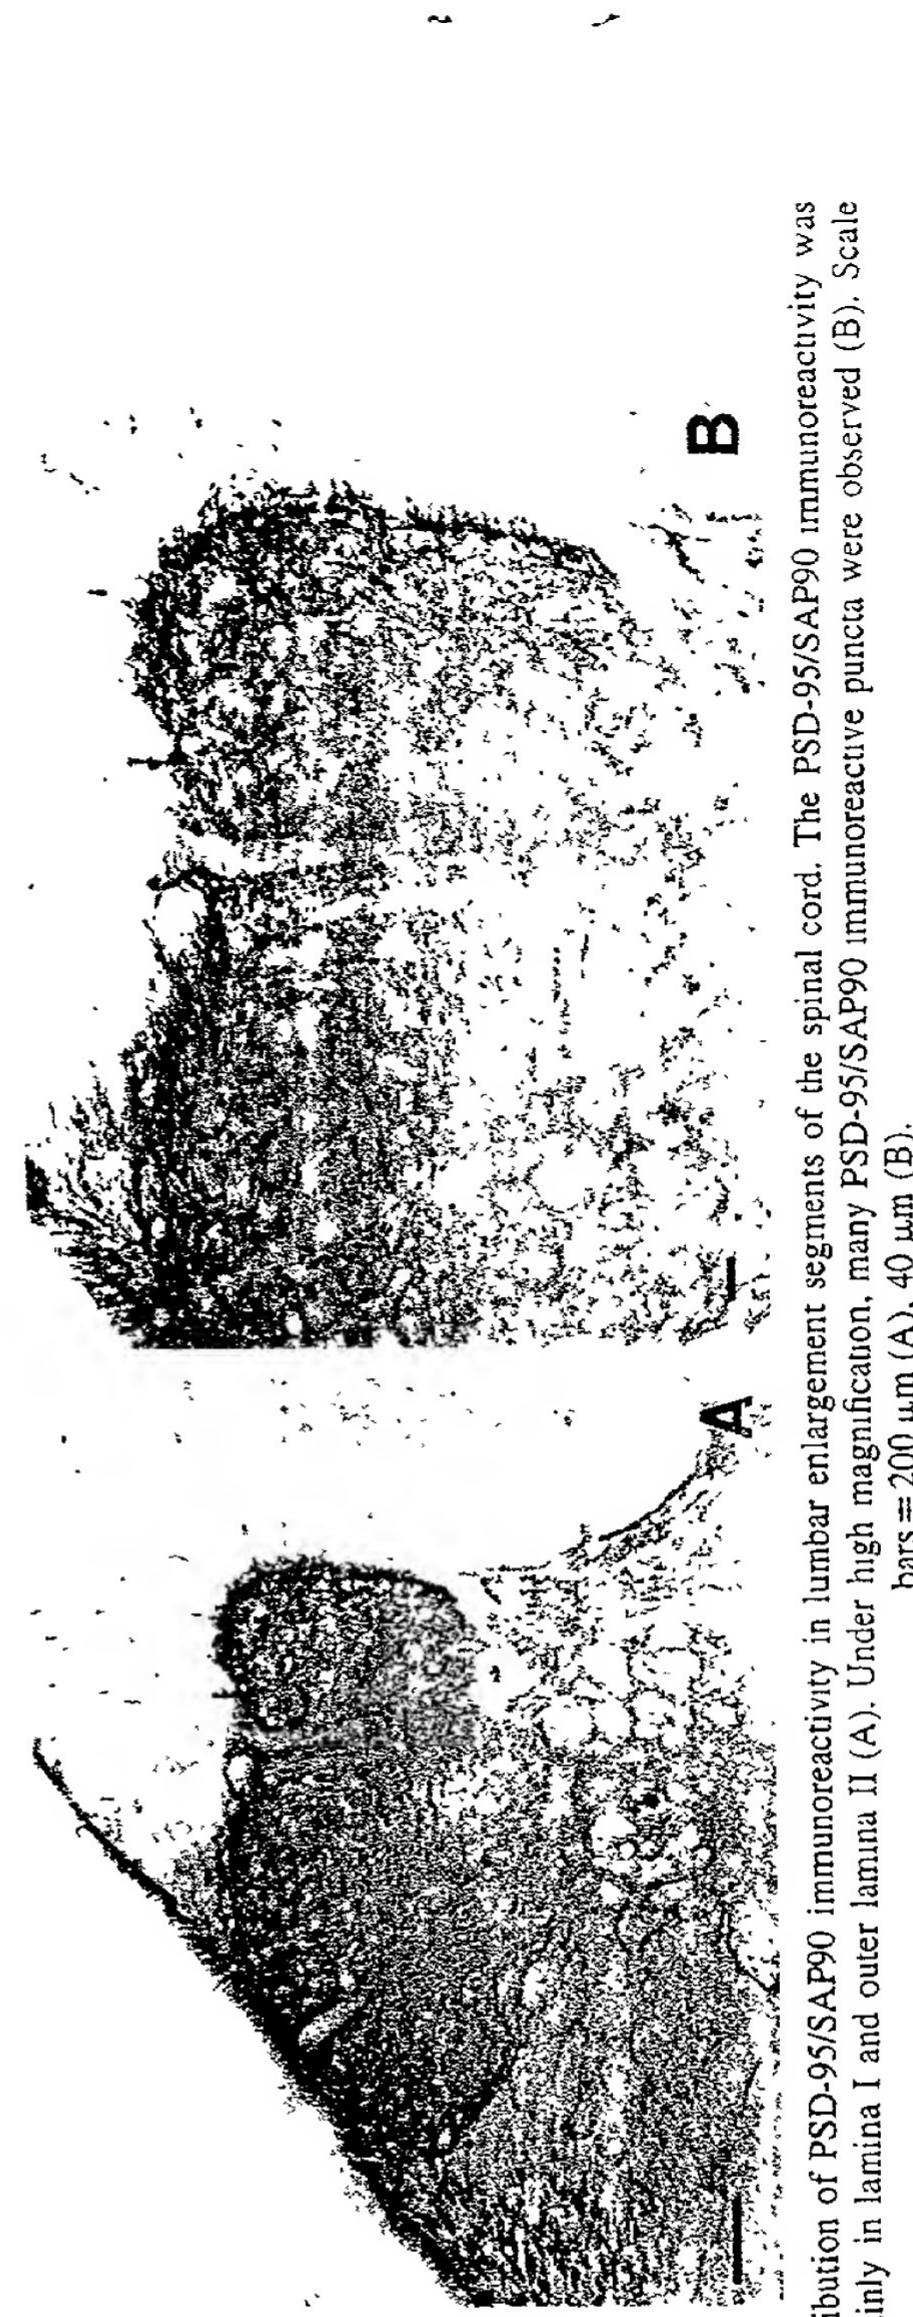

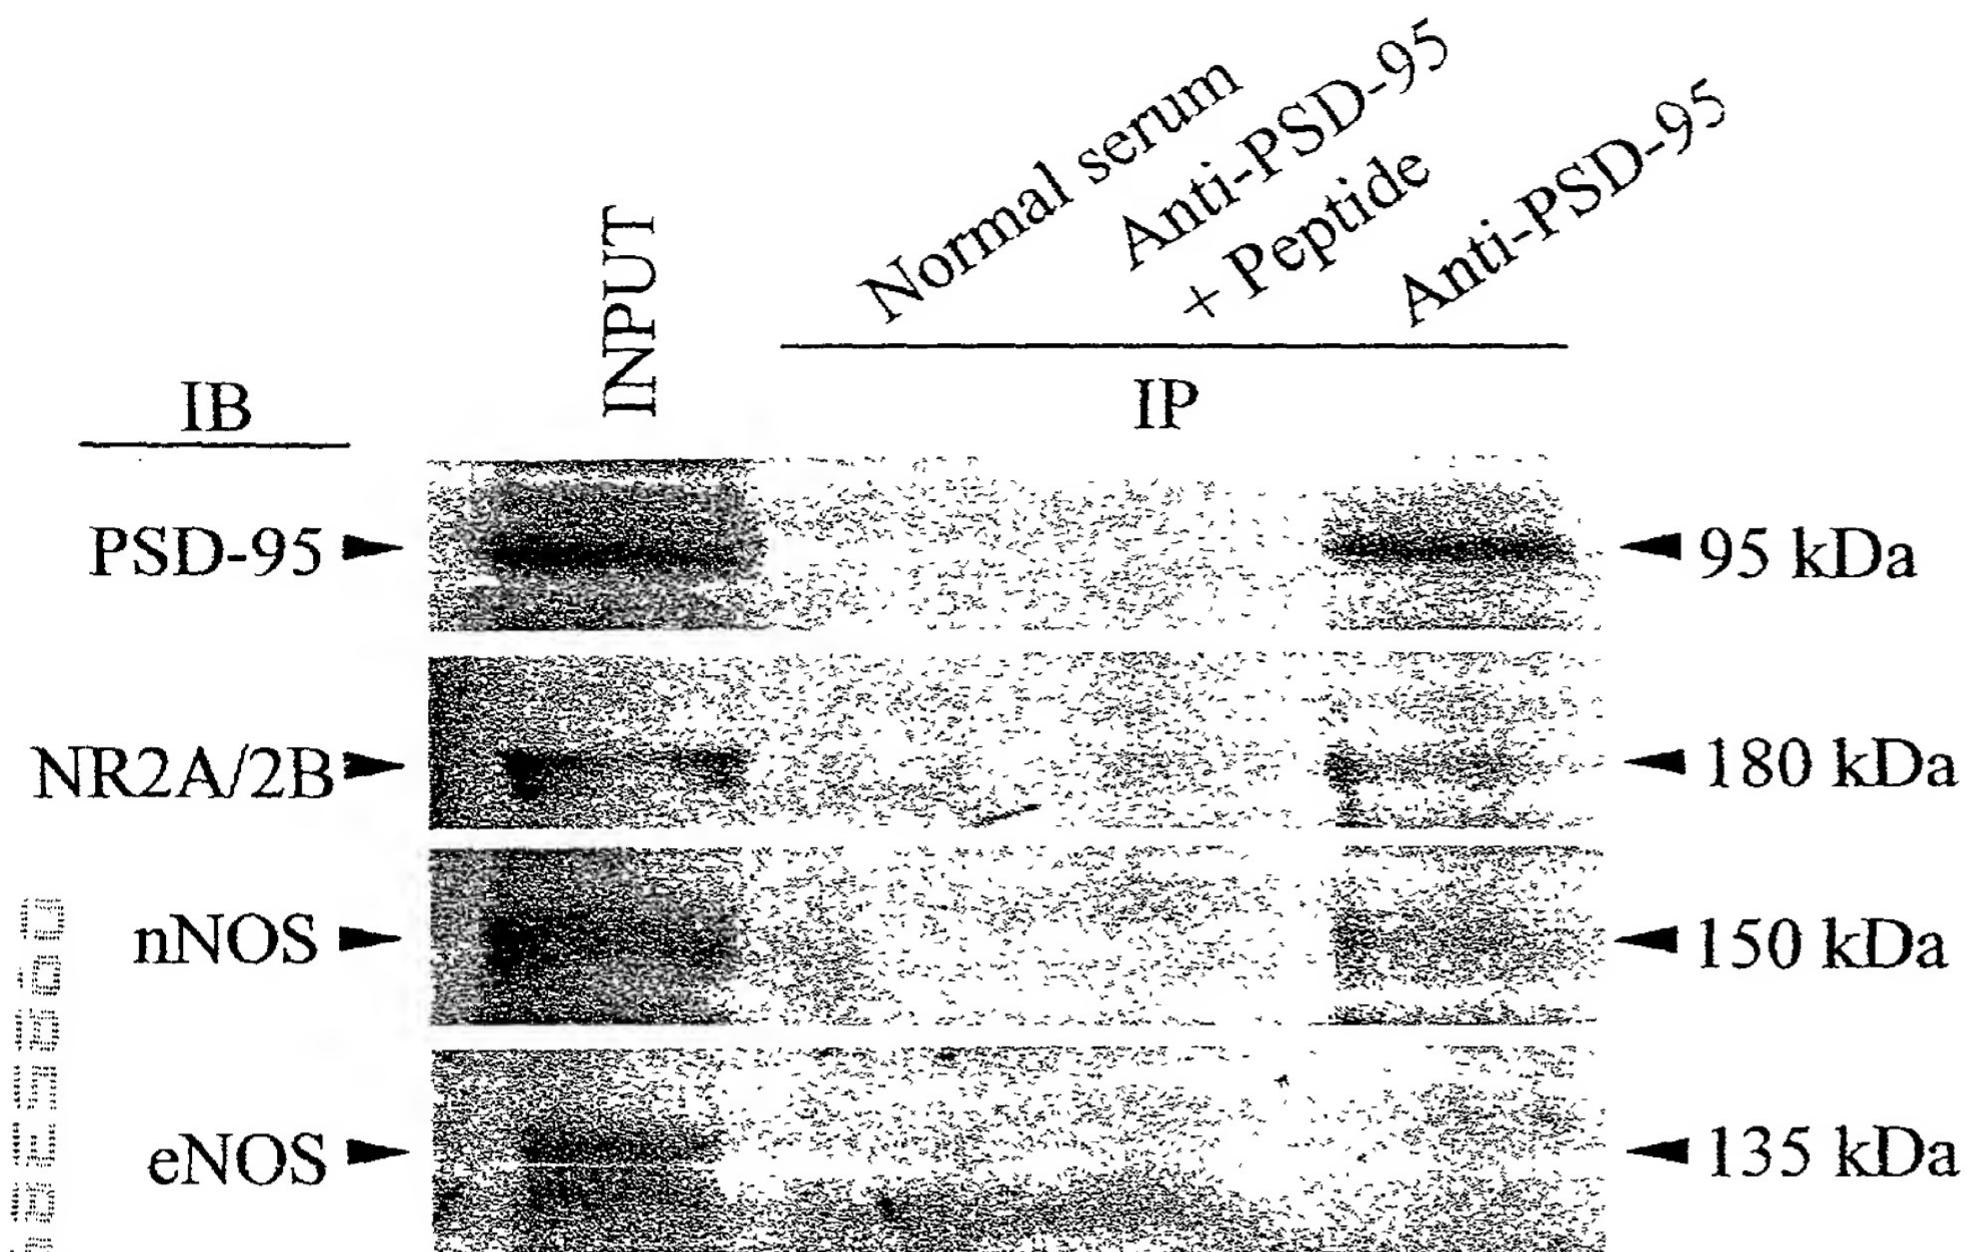

Fig. 2. Distribution of PSD-95/SAP90 immunoreactivity in lumbar enlargement segments of the spinal cord. The PSD-95/SAP90 immunoreactivity was localized mainly in lamina I and outer lamina II (A). Under high magnification, many PSD-95/SAP90 immunoreactive puncta were observed (B). Scale bars = 200  $\mu\text{m}$  (A), 40  $\mu\text{m}$  (B).

Identification of a ternary complex assembled by PSD-95/SAP90 with NR2A/2B and nNOS in the spinal cord neurons PSD-95/SAP90 antibody co-precipitated not only PSD-95/SAP90 but also NR2A/2B and nNOS. In contrast, eNOS was not immunoprecipitated by PSD-95/SAP90 antibody. Ten micrograms of protein were loaded in INPUT lane and 100 µg in other lanes.
